

FLUORESCENTS

FREQUENTLY ASKED QUESTIONS

Q. What are the advantages of T4 fluorescent tubes?

A. Crompton Lighting's T4 tubes offer the user several advantages with their compact size, brighter, whiter light, energy efficiency and long life. Crompton's linkable fluorescent range utilises T4 fluorescent tube technology.

Q. What makes the linkable fluorescents so different?

A. The linkable fluorescents are slimline and compact in size, utilise T4 lamp technology, can be plugged together to form a continuous strip of light (up to six units can be linked), and with their flex & plug, can be easily installed by the home-owner. No wiring is required to install these fluorescents, which can be linked to form a straight line, or which can go around curves and corners using the linking cable which is sold separately. These features make them ideal for undershelf and bench lighting.

Q. There are so many other fluorescent fittings in your range, how can I tell which one is the best for my application?

A. To help you identify the right fluorescent fitting for your application, refer to the handy table below:

Fitting	Features	Applications
Standard Fluorescent Battens	<ul style="list-style-type: none"> ● Triphosphor tubes included (for a brighter and more energy efficient light) ● Full colour packaging ● High power factor corrected ● Available in 18W and 36W, twin & single, diffused & bare types 	<ul style="list-style-type: none"> ● Living areas ● Kitchens ● Offices ● Work areas ● Garages
